

As a global technology leader, LyondellBasell delivers state-of-the-art manufacturing processes, catalysts and services. For our turnaround operations we were looking for a more advanced way to estimate the costs of our turnarounds. Recently we have incorporated Cleopatra Enterprise software because it is not just a global cost estimating tool, but it is also perfectly suited for turnaround projects and maintenance activities.

There were many reasons to choose Cleopatra Enterprise as our cost estimating software for turnarounds. First of all, the program interface is not only sophisticated, but also intuitive and easy-to-use. Also, the possibility to create estimates very quickly in the early stages of a project and the customizability of the estimates added significant value to our turnaround projects. Aspects that occur regularly during turnarounds can be easily specified in estimates, like overtime and multiple contractors for the same discipline. Finally, because of the interface with Primavera software it becomes very easy to create a planning - and adjust that planning on the fly - based on the cost estimate, which saves us valuable time and effort.

These are just a few of the reasons why Cleopatra Enterprise successfully supports our turnaround projects and managing turnarounds becomes more easy and efficient. All in all, Cleopatra Enterprise is the perfect solution for Lyondell, since we can now efficiently and accurately estimate the costs for turnarounds through the entire turnaround project. From the moment of the identification of the turnaround, where we can already perform a screening estimate to get an idea of the initial budget, all the way to the actual execution phase, Cleopatra Enterprise has become a crucial part of our business.
